

**Groep di pazienti target**  
Per il trattamento di donne e uomini di qualsiasi fascia di età, nonché bambini.

**Uso**  
Esclusivamente per uso odontoiatrico.

**Descrizione**  
Fil di retrazione a maglie concatenate in cotone 100%.

**Indicazioni**  
Ausilio per retrarre e trattener la gengiva.

**Controindicazioni**

**Nessuno**

**Beneficio clinico**

Ausilio per preparare la presa dell'impronta per la fabbricazione di corone o ponti.

Ausilio per otturazioni profonde o otturazioni dei colletti dentali.

**Caratteristiche del prodotto**

Numerose micro-maglie formano una catena ad incastro. Lo speciale design consente di ottenere una presa uniforme e costante nel solco gengivale. Grazie alla sua speciale struttura concatenata, Elite Cord assicura un'eccellente retrazione del tessuto gengivale e rimane meglio inserito nel solco rispetto ai fili di retrazione tradizionali. I fili Elite Cord offrono inoltre un'eccezionale azione emostatica, poiché assorbono quantità significativamente maggiori di agenti emostatici rispetto ai fili tradizionali.

- La misura #2 è talvolta anche la misura #3 sono indicate per i molari.

- Le misure #0 e #00 sono spesso usate per gli incisivi inferiori.

- La misura #000 è usata per le preparazioni e per la cementazione di facette e per i tessuti del doppio filo. Le caratteristiche del tessuto e l'ampiezza desiderata dello spazio libero possono rendere necessario l'uso di misure diverse da quelle descritte sopra.

- Se preferibile o necessario, il filo di retrazione a maglie concatenate può essere imbevuto con una soluzione emostatica. In alternativa, il filo può essere impregnato con cloruro di alluminio, una soluzione di fosfato o una soluzione di cloridato d'epinefrina.

**Precauzioni speciali**

A causa della modalità di imballaggio, i fili di retrazione sono pressati. Selezionare una misura più grande del previsto.

**Modalità d'uso**

1. Selezionare la misura appropriata di un filo di retrazione.

2. Utilizzare uno strumento per filo di retrazione per inserire il filo di retrazione nel solco.

3. Una volta inserito il filo di retrazione, irrigare le aree interessate. Si ottiene una retrazione ottimale del tessuto nell'arco di 1-3 minuti.

4. Rimuovere il filo di retrazione dal solco prima della presa dell'impronta. Irrigare leggermente nebulizzando acqua per pulire la preparazione e testare l'azione dell'agente emostatico.

**Avvertenze / rischi residui**

nessuno

**Conservazione**

In luogo asciutto, a temperatura ambiente.

**Durata minima**

3 anni, se conservato correttamente. Vedere l'imballaggio esterno.

**Varianti**

Le diverse misure dei fili di retrazione

**Misura #000**

- Preparazione e cementazione di facette

- Trattamento restaurativo in caso di tessuto sottile e fragile

**Misura #00 / misura #0**

- Incisivi inferiori

- Fissaggio di facette in prossimità di aree gengivali o subgengivali

- Restauri delle classi III, IV + V

- Secondo filo nella "tecnica a due fili"

**Misura #1**

- Le misure 1 e 2 sono particolarmente efficaci per il controllo e/o la retrazione del tessuto, se preventivamente imbevute in una soluzione emostatica, prima o dopo la preparazione di corone

- Utilizzare un "filo di preparazione preliminare" protettivo per gli incisivi

**Misura #2**

- Filo superiore nella "tecnica a due fili"

- "Filo di preparazione preliminare" protettivo per gli incisivi

**Misura #3**

- Le misure 1 e 2 sono particolarmente efficaci per il controllo e/o la retrazione del tessuto, se preventivamente imbevute in una soluzione emostatica, prima o dopo la preparazione di corone

- Utilizzare un "filo di preparazione preliminare" protettivo per gli incisivi

**Misura #4**

- La misura #000 è usata per preparazioni o cementazioni di veneers e per thin, tightly fitting sulcus tissue. This size is also used as the lower thread for the double-thread technique. The nature of the tissue and the desired size of the free space may make it necessary to use sizes other than those described above. If preferred or necessary, the knitted retraction thread can be soaked in a hemostatic solution, as they absorb significantly greater amounts of haemostatic agents than conventional threads.

- Size #2 e occasionally size #3 are suitable for molars.

- Size #1 is often suitable for premolars and upper teeth.

- Sizes #0 or #00 are often used for the lower front teeth.

- The thread size #000 is used for preparations or cementing of veneers and for thin, tightly fitting sulcus tissue. This size is also used as the lower thread for the double-thread technique. The nature of the tissue and the desired size of the free space may make it necessary to use sizes other than those described above. If preferred or necessary, the knitted retraction thread can be soaked in a hemostatic solution, as they absorb significantly greater amounts of haemostatic agents than conventional threads.

- Size #2 e occasionally size #3 are suitable for molars.

- Size #1 is often suitable for premolars and upper teeth.

- Sizes #0 or #00 are often used for the lower front teeth.

- The thread size #000 is used for preparations or cementing of veneers and for thin, tightly fitting sulcus tissue. This size is also used as the lower thread for the double-thread technique. The nature of the tissue and the desired size of the free space may make it necessary to use sizes other than those described above. If preferred or necessary, the knitted retraction thread can be soaked in a hemostatic solution, as they absorb significantly greater amounts of haemostatic agents than conventional threads.

- Size #2 e occasionally size #3 are suitable for molars.

- Size #1 is often suitable for premolars and upper teeth.

- Sizes #0 or #00 are often used for the lower front teeth.

<b>SL - Elite Cord</b>	Informacije za uporabo
Cijena skupina pacientov	
Za zdravstvene žen in mož vseh starostnih skupin, otrok.	
<b>Uporabnik</b>	
Izklučno za zdravstveno uporabo.	
<b>Opis</b>	Plethen retrakcijske nitke iz 100-odstotnega bombaža.
<b>Indikacije</b>	Pripravo za potiskanje in zadrževanje dlesni.
<b>Kontraindikacije</b>	
Brez	
<b>Klinička uporaba</b>	Pripravo za pripomoček od tista za izdelavo kran ali mostičkov.
Pripromoček pri globokih zahalkah ali zahalkah zobnega vrata.	
<b>Značilnosti izdelka</b>	
Številne, zelo majhne zanke oblikujejo povezano verigo. Posebna oblika povzroči enakomeren, trajni pritisk v bradi dlesni. Elite Cord s svojim posebnim plethenom zaglavju odlično potiskuje tkiva in v sulusu ostane bolje kot običajne retrakcijske nitke.	
Elite Cord niti, nadzor tudi odlično hemostatiko vpliv, ker vplja pomembno večje kolicine hemostatikov kot običajne nitke.	
- Velikost #2 v vseh tudi velikost #3 sta primerni za meljake.	
- Velikost #1 je pogosto primerna za kočinke in zobe zgornje čeluste.	
- Velikost #0 ali #00 se pogosto uporablja za sprednje zobe.	
- Velikost #000 se uporablja pri pravljici ali cementiranju maske in pri tankem, ozko prileganjem se sulusnemu tkivu. Ta velikost se uporablja tudi kot spodnja nitka pri tehniki dvojne nitke. Zaradi sesave tkive in zeleni velikosti prostega prostora je lahko potreba uporaba drugih velikosti do prej opisanih. V kolikor je prednostno ali najnjo, je mogoče plethen retrakcijsko nitko prepojiti s hemostatično raztopino. Plethen niti je mogoče prepojiti z aluminijevim kloridom, s fosfatno raztopino ali z epinefričnim hidrokloridom raztopino.	
<b>Posebne previdnostni ukrepi</b>	
Zaradi vrstni embalaže se retrakcijske nitke stisnejo. Izberite eno številko večjo od pričakovane.	
<b>Uporaba</b>	
1. Uporabite primerno velikost retrakcijske nitke.	
2. Uporabite polnilo nitke za vstavljanje retrakcijske nitke v sulku.	
3. Po vstavljanju retrakcijske nitke izberite prizadeta mesta. Optimalno potiskanje tkiva se izvede v 1–3 minutah.	
4. Pred odvzemom odstraňite retrakcijsko nitko s sulksa. Poškoprite z nekaj vode, da očistite prirapek in preizkusite učink hemostatika.	
<b>Oporozilo/prestala tveganja</b>	
brez	
<b>Shranjevanje</b>	Na suhem pri sobni temperaturi.
<b>Rok uporabe</b>	Pri pravilnem shranjevanju tri leta. Glejte zunanjem embalažo.
<b>Različice</b>	Različice velikosti retrakcijskih nitk
<b>Velikost #000</b>	
- Prirapek in cementiranje mask	
- Zdravljene z zobilimi nadomestki pri tankem in krhkem tkivu	
<b>Velikost #0 / Velikost #0</b>	
- Spodnji sprednji zobje	
- Za pritrivite maske v bližini območja dlesni in pod dlesnijo.	
- Zobilni nadomestki razredov III, IV + V	
- Druga nitka za tehniko dvojne nitke"	
<b>Velikost #1</b>	
- Velikost 1 in 2 sta se posebej učinkoviti za nadzor tkiv in/ali povratno potiskanje, če se predhodno uporabljata v hemostatično raztopini za zaustavljanje krvi pred ali po prirapev krone	
- Pri sprednjih zobjih uporabite začasno „nitko za vnaprejšnjo priravo“	
<b>Velikost #2</b>	
- Zgorja nitka za „tehniko dvojne nitke“	
- začasna „nitka za vnaprejšnjo priravo“ pri sprednjih zobjih	
<b>Odstranjevanje med odpadke</b>	Pravilno odstranite med odpadke ob upoštevanju lokalnih uradnih predpisov.
Nekontaminirano embalažo je mogoče reciklirati.	
<b>Neželeni učinki, reakcijah ali drugih neželenih pojavov pri bolniku in/ali uporabniku (tudi v primerih dvoma)</b>	je treba takoj in podrobno obvestiti prizadetega.
