GREATER EXPERIENCE, GREATER CHOICE

Addition silicone for impression taking

Zhermack 
Dental

elite HD+

GREATER EXPERIENCE,
GREATER CHOICE

A vast and versatile range, to satisfy all user requirements. At the practitioner's side, every day.

DEVELOPED IN ITALY, USED THE WORLD OVER

Elite HD+ was Zhermack's first addition silicone range.

For over 25 years, Elite HD+ has boasted a vast array of impression taking solutions, making it a particularly **versatile** range **able to satisfy all clinical demands**.

DEDICATED TO THOSE WHO LIKE TO CHOOSE

The range affords practitioners the chance to choose from a diverse array of solutions, in order to opt for that which best suits their clinical practice.

Elite HD+ features **a vast range of viscosities** to suit a number of clinical indications and personal preferences, **pack types** that are ideal for all mixing techniques and **normal or fast setting times**, to meet specific requirements.

Versatile

One product,
many different solutions.

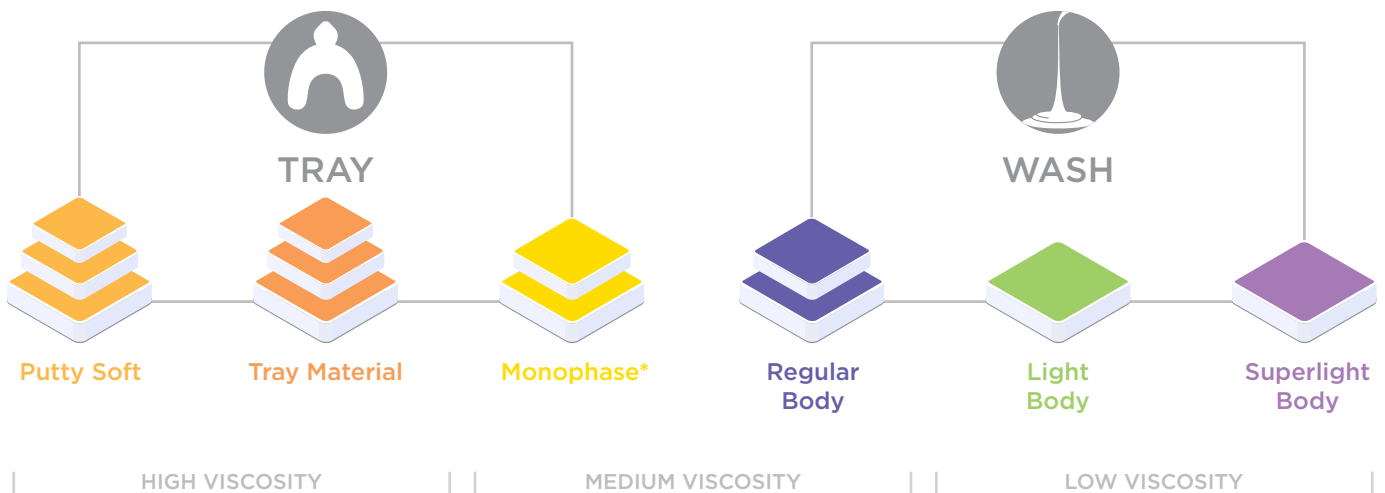

BROAD RANGE OF VISCOSITIES

Elite HD+ affords a **complete range of viscosities** to choose from: three viscosities for impression trays - Putty Soft, Tray Material and Monophase* - and as many washes - Regular Body, Light Body, Super Light Body - allowing practitioners to obtain the most accurate and precise impression possible.

BE GUIDED BY EXPERIENCE, CHOOSE THE BEST SOLUTION FOR YOU!

It is possible to choose the right combination of materials with different viscosities, depending on the technique to be used**.

PICK & MATCH

*Monophase: can also be used with the monophase technique, as it can be positioned both on an impression tray and directly on the patient's teeth.

** For guidance on techniques and combinations, see page 9.

at every use

MANUAL, SEMI-AUTOMATIC AND AUTOMATIC MIXING

The Elite HD+ range includes **pack types suited to all mixing techniques.**

Impression tray materials for manual mixing (Putty Soft), for semi-automatic mixing using a 1:1 dispenser (Tray Material and Monophase) and for automatic mixing with a 5:1 mixer (Maxi Putty Soft, Maxi Tray Material, Maxi Monophase).

Wash materials for manual mixing (Light and Regular Body in tubes) and for semi-automatic mixing with a 1:1 dispenser (Regular, Light and Super Light Body).

NORMAL OR FAST SETTING TIMES

The Elite HD+ range allows practitioners to choose between normal and fast set materials to suit their clinical needs or personal preferences.

MIXING

Simply

The characteristics required for an accurate impression, in a single product^[1,2].

HYDROCOMPATIBILITY

Hydrocompatibility is another essential characteristic for an impression material, as it makes a decisive contribution to the accurate reproduction of detail.

Hydrocompatible materials flow readily over the surface of the teeth and along preparation margins, making it possible to capture the details required for an accurate impression.

HYDROCOMPATIBILITY AND THIXOTROPY: WHAT A COMBINATION!

Elite HD+ washes are **hydrocompatible** and yet **thixotropic**, making them easy for dentists to use. They flow over the surfaces they are positioned on and do not run once they have been positioned in the patient's mouth.

When we talk about hydrophilia

Not all impression materials behave in the same way in terms of hydrophilia.

Studies published in clinical literature have shown that the high hydrophilia of certain materials can result in the absorption of water and affect dimensional accuracy^[3].

On the other hand, the hydrophobic nature of silicones does not result in this behaviour that is potentially detrimental to the accuracy of the entire prosthetic process. At the same time, the addition of surfactants to the formula also allows them to flow readily in wet environments.

More than hydrophilia.

Affinity with water, according to Zhermack.

This is why Zhermack talks about **hydrocompatibility** to differentiate its silicones that, with their limited contact angle, afford excellent performance in wet environments by maintaining dimensional stability.

what you need

TEAR RESISTANCE

The information regarding the preparation margin is that which is most important for the work carried out by dental technicians and it must be maintained until the impression is cast, in order to obtain an accurate model.

Elite HD+ **resists the movements required to remove the impression from the patient's mouth^[3]**, thus helping to obtain an accurate result, even in the presence of undercuts.

ELASTIC RECOVERY

With an **elastic recovery of at least 99%**, Elite HD+ is able to return to its original form following the deformation that takes place when the impression is removed from the patient's mouth.

SAFE FOR USE EVEN ON INTOLERANT PATIENTS

All Zhermack addition silicones **are gluten- and lactose-free**, which guarantees peace of mind and safety even when used on intolerant patients.

This allows the dentist to perform impression procedures with peace of mind and in absolute safety.

Colour contrast

High contrast,
better visual comfort

WHEN COLOUR RHYMES WITH CERTAINTY

The high-contrast colour combinations are the most effective solutions for a better user experience.

BETTER VISUAL COMFORT

The colours of the tray materials and the washes of the Elite HD+ range were chosen to create a colour contrast for improved impression interpretation and therefore afford practitioners better visual comfort.

Impression techniques

Advice on techniques and combinations

BE INSPIRED

Practitioners can choose from different combinations of materials with different viscosities. The guidance provided below is mere advice, clinicians are free to choose the combination they believe to be most appropriate, according to the clinical setting or their personal preferences.

PRODUCT	RECOMMENDED TECHNIQUE	RECOMMENDED COMBINATION
Elite HD+ Putty Soft Elite HD+ Maxi Putty Soft	Double step impression	Elite HD+ Light Body Elite HD+ Super Light Body

Find out more about Zhermack impression products

The disinfection of the impression is an essential step in order to limit the risk of cross-contamination between the dental practice and the dental laboratory.

All Zhermack silicones can be disinfected using products containing quaternary ammonium salts, mixtures of alcohol and surface tension reducers, such as **Zeta 7 Spray** and **Zeta 7 Solution** from Zhermack's Zeta Hygiene line, whilst maintaining their dimensional stability and surface detail reproduction even after disinfection^[4,5].

Zeta 7 Spray

Ready-to-use disinfectant spray with a broad spectrum of action for rapid impression disinfection.

Zeta 7 Solution

Concentrated disinfectant with a broad spectrum of action for impression disinfection

Elite HD+ 5:1 cartridges can be used with **Sympress**, the automatic mixer designed for quick and easy impression material mixing.

Automatic mixing makes it possible to obtain constant mixing with a quality that is usually superior to manual mixing.
